

Krannich Solar - 30 Years of Passion for Solar Energy

global solar distribution

Welcome to Krannich Solar - Your Trusted Partner in Solar Energy

As one of the world's leading solar energy wholesalers, we provide everything professional installers need for a complete PV system: our portfolio includes mounting systems, solar modules, inverters, battery storage, EV chargers, and more. **All from a single source – delivered worldwide.**

But Krannich is more than a distributor. We are experts. With deep market insight and strong technical know-how, we understand the challenges our customers face – and we curate our product range with care and foresight. This allows us to combine innovative solutions with proven technologies.

In the following pages, you'll discover more about who we are, what drives us – and how, together, we can shape the energy transition.

Kurt Krannich 1995

global

distribution

„Entrepreneur-driven companies are ‘different’ – and Krannich Solar is a typical entrepreneur-driven company.

For us, our business is far more than just a job.

We act with conviction to give meaning to our work and contribute to our vision of ‘100% renewable energies’.

And we’ve been doing this for 30 years! That also means three decades of experience in dynamic markets strongly influenced by political frameworks. Which is why we look to the coming years with optimism and confidence.“

Kurt Krannich

OUR SERVICES

We go the extra mile to support your success. Here's just a small selection of the additional services we provide. But the best way to find out what we're really like? Get to know us in person.

From Overview to Insight

Our **product overviews** help you stay on top of things – with clear, concise information on the performance, compatibility, and key features of our inverters, storage systems, and solar modules. Whether for residential or commercial use, you'll have everything you need to make informed decisions.

Advice You Can Build On

Whether it's your first order or a complex project question, our team is here to support you with **technical expertise** and **personal guidance**. You'll find contact details for our sales team on page 7. For technical enquiries, our colleagues from Aftersales or Technical Support will be happy to assist you.

Across All Channels - Always Informed

From product highlights and unboxing videos to webinars and industry trends – our YouTube channel offers valuable insights into the world of photovoltaics.

On **LinkedIn, Facebook, and Instagram**, we share project updates, major events, and exciting perspectives on the future of the solar industry.

WHY KRANNICH SOLAR?

A Reliable Partner – Today and Tomorrow

- + Over 30 years of experience in the solar industry
- + Owner-managed and self-financed
- + Strong market position with sustainable growth

Your benefit: A financially stable partner with experience – for long-term success.

PV Purchasing – Easier Than Ever

- + One of the largest product ranges in the PV wholesale market
- + Fast and reliable delivery thanks to available stock
- + User-friendly webshops – and personal contact with experts

Your benefit: Hassle-free purchasing – everything you need from a single source.

Product Selection – With Expertise

- + Carefully selected brands with high quality standards
- + Technology-driven approach: the best solution for every application
- + Early adoption of new technologies and trends

Your benefit: Professional guidance to choose reliable, future-ready products.

Global Reach – Local Expertise

- + International focus – and local expert teams
- + Market-specific know-how
- + Reliable logistics to ensure fast, seamless service

Your benefit: The strength of a global player with the service and proximity of a local partner.

OUR SOLUTIONS FOR RESIDENTIAL PROJECTS

Krannich Solar offers one of the most extensive portfolios in the PV wholesale market. We cover all product categories, stock the industry's leading brands – and always provide strong alternatives. Everything you need for a complete PV installation is available from a single source. With over 200,000 m² of warehouse space, most products are ready for immediate dispatch – and on their way to customers worldwide in no time.

Solar Modules

Whether for standard systems, large-scale projects or specialist applications – we offer a **wide selection** of solar modules in various sizes and performance classes. This includes modules designed for high snow loads, enhanced hail resistance, overhead mounting, or with distinctive aesthetics. Whatever the project, **we've got the right module for the job.**

Inverters

Whether single-phase or three-phase, compact or high-capacity – we offer the right **inverter for every residential PV system.** With features such as shading optimisation, energy management, and backup power functionality, you'll find the ideal solution for your needs. Our portfolio also includes micro-inverters and power optimizers to complete the system.

Storage Systems

Whether high-voltage or low-voltage, stand-alone or modularly expandable – our lithium-ion storage systems offer **flexible solutions** with or without backup functionality. Information on compatibility between storage systems and inverters can be found in our practical storage overviews.

EV Chargers

Our AC-coupled wallboxes offer charging capacities of **up to 22 kW** – with compact models starting from 3.7 kW. Many units support phase switching and are ideally suited for **surplus energy charging**.

Mounting Systems

We offer **K2 Systems** mounting systems **suited for all roof types** – including options for façade installations. Our range also includes roof plates from **Marzari** and **Otto Lehmann**, featuring integrated or pre-mounted roof hooks for easier installation.

Accessories

Everything else you need for system installation – from cables and connectors to screws, nuts, grid connection components, tools, and more.

OUR PRODUCT RANGE

OUR SOLUTIONS FOR COMMERCIAL PROJECTS

Commercial PV systems are far more diverse than residential ones. They vary widely in size and complexity, with operators often pursuing unique business models. Large-scale PV systems and storage solutions open up new opportunities – such as optimising self-consumption, peak shaving, or participating in energy trading. As a result, even six-figure investments often pay for themselves within just a few years.

Inverters

Inverters for commercial systems must handle significantly higher power levels – with 30 kW generally marking the threshold beyond residential scale.

Our portfolio covers a wide range of commercial inverters up to 300 kW, offering tailored solutions to meet a variety of business-specific requirements.

EV-Chargers

Companies that provide charging infrastructure for employees or offer electricity for public use require high-performance charging stations with features such as authentication, access control, and – where needed – integrated payment functionality. We offer exactly these kinds of solutions: flexible, powerful, and future-proof.

FIND OUT MORE
ON OUR WEBSITE

COMMERCIAL ENERGY STORAGE

Commercial Storage

Commercial storage solutions range from compact systems for self-consumption to container-based installations in the megawatt range. To help you navigate our offering more easily, we group our solutions into three categories: small-scale commercial storage, large-scale commercial storage, and BESS solutions (Battery Energy Storage System).

Small-Scale Commercial Storage

These systems function similarly to residential battery storage, typically using DC coupling and requiring a dedicated battery or hybrid inverter. With capacities of up to 200 kWh, they are ideal for optimising self-consumption – without the need for complex additional functionality.

Large-Scale Commercial Storage

Large storage cabinets typically start at 100 kWh. They offer space for integrated or external inverters and can be modularly scaled up to the megawatt range. Due to their size and weight, these systems require specialised planning. Thanks to applications such as peak shaving or energy trading, they often pay off – even without a connected PV system.
